                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 32,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                US-08-819-037-41

Sequence 41, Application US/08819037

Patent No. 6028248

GENERAL INFORMATION:

APPLICANT: SOMERVILLE, CHRIS

APPLICANT: VAN DE LOO, FRANK

TITLE OF INVENTION: USE OF PLANT PATTY ACYL HYDROXYLASES TO

TITLE OF INVENTION: PRODUCE HYDROXYLATED FATTY ACIDS AND DERIVATIVES IN PLANTS

NUMBER OF SEQUENCES: 48
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               127
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            133

New isolated nucleic acid molecule encoding a delta 12-fatty acid epoxygenase enzyme, useful for genetically producing industrial products including coating, composites, adhesives and plasticizers.

Claim 1; SEQ ID NO 2; 22pp; English.

The present invention relates to a nucleic acid molecule encoding a delta 12-fatty acid epoxygenase enzyme. The invention is useful for genetically producing raw materials in the manufacture of industrial products including coating, composites, adhesives and plasticizers. The present sequence is the Stokesia laevis fatty acid epoxygenase protein.

The invention relates to a transgenic plant containing at least one DNA construct comprising: (a) a nucleic acid encoding a polypeptide effective for catalyzing the conversion of a substrate to a C16, C18, or C20 monounsaturated fatty acid product; and (b) a regulatory element operably linked to the nucleic acid encoding the polypeptide and conferring expression in a vegetative tissue of the plant. Also described: (1) a method of making a transgenic plant; (2) an isolated nucleic acid comprising the nucleotide sequence; (3) a recombinant nucleic acid construct comprising at least one regulatory element that confers expression in a vegetative tissue of a plant; and (4) a method of expression in a vegetative tissue of a plant; and (4) a method of plant is useful in preparing compounds having anthelminic activity. The present sequence represents an epoxygenase which is used in the construction of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FGLLNRVFHDVTHTHVLHHLFPY1PHYHAKEASEAIKPILGDYRMIDRTPFFKAMWREAK 356
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      enzyme. The present invention also describes: (i) Vernonia galamenensis fatty acid desaturase; (ii) chimeric genes comprising the fragments linked to regulatory sequences; and (iii) transformed host cells containing the chimeric genes. The DNA's from the present invention can be used to alter levels of expression of the enzymes in transformed host cells or to produce the recombinant enzymes by transformation of microbial host cells. (Updated on 27-AUG-2003 to correct OS field.)

The present invention relates to transgenic plants (I) containing one or more DNA constructs have a nucleic acid encoding a protein effective for catalyzing the conversion of a substrate to a 16C, 18C or 20C monounsaturated fatty acid product, e.g. a fatty acid concounsaturated fatty acid product, e.g. a fatty acid encoding the protein, where the regulatory element operably linked to the nucleic acid encoding the protein, where the regulatory clement confers expression in vegetative tissue of the plant. The fatty clement confers expression in vegetative tissue of the plant. The fatty cacid epoxygenase or a fatty hydroxylase can be phospholipid:diacylglycerol acyltransferase (PDAGAT). (I) has an increased amount of hydroxylatty acid, e.g., ricinoleic acid and epoxy-fatty acid, e.g., vernolic acid, in a vegetative tissue. The DNA construct of (I) is useful in the production of hydroxylases and epoxygenases that controls nematode damage in commercially important plant species and so (I) exhibits increased resistance to mematodes. (I) provides an effective, environmentally safe methods of inhibiting nematode metabolism, growth, viability, development, infectivity and/or the nematode life cycle. (I) provides season-long nematode control, thus providing labor savings, by reducing the need for and frequency of chemical control. The present sequence is one such fatty acid epoxygenase and fatty hydroxylase used to illustrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 YTVANTYIPHLPPPLVYLAWPVYWFCQSCILTGLWVLGHECGHHAFSEYQWIDNAVGFVL 120

                season-long nematode control, thus providing labor savings, by reducing the need for and frequency of chemical control. The present sequence is one such farty acid epoxygenase and farty hydroxylase, which has been codon optimised for improved plant expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to transgenic plants (I) containing one or more DNA constructs have a nucleic acid encoding a protein effective for catalyzing the conversion of a substrate to a 16C, 18C or 20C monounsaturated fatty acid product, e.g. a fatty acid encoding the protein where the regulatory element operably linked to the nucleic acid encoding the protein, where the regulatory clement conferes expression in vegetative tissue of the plant. The fatty acid epoxygenase or a fatty hydroxylase can be conferenced (DATA) and acid epoxygenase or a fatty hydroxylase can be conferenced (DATA) or diacylglycerol collection acid epoxygenase (DATA). (I) has an increased amount of hydroxylatory acid, e.g., ricinolaic acid and epoxy-fatty acid, e.g., vernolic acid, in a vegetative tissue. The DNA construct of (I) is useful in the production of hydroxylases and epoxygenases that controls nemaced damage in commercially important plant species and so (I) exhibits increased a commercially important plant species and so (I) exhibits increased commercially safe methods of inhibiting nematode metabolism, growth, viability,

The present invention relates to transgenic plants (1) containing one or more DNA constructs. The DNA constructs have a nucleic acid encoding a protein effective for catalyzing the conversion of a substrate to a 16C, 18C or 20C monounsaturated fatty acid product, e.g. a fatty acid concounsaturated fatty acid product, e.g. a fatty acid concounsaturated fatty acid product, e.g. a fatty acid concounsaturated encoding the protein, where the regulatory linked to the nucleic acid encoding the protein, where the regulatory clement confers expression in vegetative tissue of the plant. The fatty concounsation of a fatty hydroxylase can be prospholipidiacylglycerol acyltransferase (PDAT) or diacylglycerol acyltransferase (PDAT) or diacylglycerol acyltransferase (DAGAT). (1) has an increased amount of hydroxylasty acid, e.g., ricinoleic acid and epoxy-fatty acid, e.g., vernolic acid, in a vegetative tissue. The DNA construct of (1) is useful in the production of hydroxylases and epoxygenases that controls nematode damage in commercially important plant species and so (1) exhibits increased commercially important plant species and so (1) exhibits increased control, thus providing labor savings, by reducing development, infectivity and/or the nematode life cycle. (1) provides methods of inhibiting nematode metabolism, growth, viability, development, infectivity and/or the nematode life cycle. (1) provides canson. Inom mematode control, thus providing labor savings, by reducing the need for and frequency of chemical control. The present sequence is one such fatty acid epoxygenase and fatty hydroxylase, which has been
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 181 MLTLGFPLYLLTNVSGKKYDRFTNHFDPLSPIFTERERIQVALSDLGIVAVFYGLKFLVQ 240

The invention relates to a transgenic plant containing at least one DNA construct comprising: (a) a nucleic acid encoding a polypeptide effective for atalyzing the conversion of a substrate to a C16, C18, or C20 monounsaturated fatty acid product; and (b) a regulatory element operably linked to the nucleic acid encoding the polypeptide and conferring expression in a vegetative tissue of the plant. Also described: (1) a method of making a transgenic plant; (2) an isolated nucleic acid comprising the nucleotide sequence; (3) a recombinant nucleic acid comprising at least one regulatory element that confers expression in a vegetative tissue of a plant; and (4) a method of screening a transgenic plant for anthelmintic activity. The transgenic plant is useful in preparing compounds having anthelmintic activity. The exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    181 MLTLGFPLYLLTNVSGKKYDRFTNHFDPLSPIFTERERIQVALSDLGIVAVFYGLKFLVQ 240

Also described: (1) a method of maxing a transgenic plant; (2) an isolated nucleic acid comprising at least one regulatory element that confers expression in a vegetative tissue of a plant; and (4) a method of screening a transgenic plant for anthelmintic activity. The transgenic plant for anthelmintic activity. The transgenic plant is useful in preparing compounds having anthelmintic activity. The exemplification of the present invention.

The invention relates to a transgenic plant containing at least one DNA construct comprising: (a) a nucleic acid encoding a polypeptide effective for catalyzing the conversion of a substrate to a C16, C18, or C20 monounsaturated fatty acid product; and (b) a regulatory element operably linked to the nucleic acid encoding the polypeptide and conferring expression in a vegetative tissue of the plant. Also described: (1) a method of making a transgenic plant; (2) an isolated nucleic acid comprising the nucleotide sequence; (3) a recombinant nucleic acid construct comprising at least one regulatory element that confers expression in a vegetative tissue of a plant; and (4) a method of screening a transgenic plant for anthelmintic activity. The transgenic plant is useful in preparing compounds having anthelmintic activity. The present exemplification of the present invention.
                        ig a protein for catalyzing the conversion of a substrate to a C16, C20 monounsaturated fatty acid product, useful in preparing
  nucleic acid

This invention describes a novel isolated nucleic acid sequence (I)
encoding a Calendula officinalis calendulic acid desaturase polypeptide.
CT the invention also describes (I) a process for producing unsaturated
fatty acids, comprising introducing at least one copy of (I) or (II) into
an oil-producing organism, growing the organism, isolating oil from the
corganism and releasing fatty acids from the oil; (2) a process for
producing triglycerides with an increased unsaturated fatty acid content,
comprising introducing at least one copy of (I) or (II) into an oil-
producing organism, growing the organism and isolating oil from the
corganism; (3) a process for producing saturated fatty acids, comprising
introducing at least one nonfunctional copy of (I) or (II) into an oil-
producing organism, growing the organism, isolating oil from the organism
crassing fatty acids from the oil; (4) a process for producing
crassing fatty acids from the oil; (4) a process for producing
crassing at least one nonfunctional copy of (I) or (II) into an oil-
croducing organism, growing the organism and isolating oil from the
crogranism; (5) an enzyme capable of converting a diunsaturated fatty acid
crassing the organism and isolating oil from the
crogranism; (5) an enzyme capable of converting a diunsaturated fatty acid
cof to a triunsaturated fatty acid. Transgenic organism
cof to a triunsaturated fatty acid. Transgenic organism;
colls with an increased unsaturated fatty acid content. Transgenic
                                                                                                                                                                                                                                                                                                                                               v nucleic acid sequence encoding Calendula officinalis calendulic acid
saturase, useful for e.g. producing transgenic plants having oil with
increased unsaturated fatty acid content,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         organisms (especially plants) containing one or more nonfunctional copi of (I) are useful for producing oils with an increased saturated fatty acid content. (I) and fragments of (I) are also useful for isolating genomic sequences by homology screening. This sequence represents the calendulic acid desaturase described in the method of the invention
                                                                                                                                                                                                                       Ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the amino acid sequence of a novel epoxygenase of a vernolic acid containing Crepis sp. (not crepis palaestina). It was deduced from lesolated CDNA clone Crepis (see AAV63102). The deduced sequence contains His-rich motifs (see AAM7972-54) that are characteristic of mixed function monooxygenases, and shows a high degree of homology to a novel delta-12-spoxygenase (see AAM79742) of C. palaestina. The invention relates generally to novel genetic sequences (see AAV63101-03) encoding fatty acid epoxygenases (see AAW79742-44), especially delta-12-epoxygenases or mixed function monooxygenases. These provide the means by which fatty acid metabolism can be manipulated in e.g. yeast, mould, bacteria, insects, birds, mammals and plants (especially oilseed plants such as flax), in particular to convert unsaturated fatty acids to

The present invention relates to transgenic plants (1) containing one or more DNA constructs. The DNA constructs have a nucleic acid encoding a protein effective for catalyzing the conversion of a substrate to a 16C, 18C or 20C monounsaturated fatty acid product, e.g. a fatty acid epoxygenase or a fatty hydroxylase, and a regulatory element operably confers expression in vegetative tissue of the plant. The fatty element confers expression in vegetative tissue of the plant. The fatty caid epoxygenase or a fatty hydroxylase can be controlly diacylglycerol acyltransferase (PDAT) or diacylglycerol acyltransferase (PDAT) is useful in the production of hydroxylases and epoxygenases that controls nematode damage in commercially important plant species and so (1) exhibits increased connection nematodes (1) provides and fevelopment, infectivity and/or the nematode life cycle. (1) provides control. The production connection mentalod control, thus providing labor savings, by reducing the need for and frequency of chemical control. The present sequence is codon optimised for improved plant expression.
                                                                                                               encoding polypeptide for catalyzing conversion of substrate to monounsaturated fatty acid product, useful for controlling nematodes
                                                                                  transgenic plant containing DNA construct having nucleic acid
                                                                                                                                                                                            Claim 21; SEQ ID NO 41; 180pp; English.

```
The invention relates to a transgenic plant containing at least one DNA construct comprising: (a) a nucleic acid encoding a polypeptide effective for catalyzing the conversion of a substrate to a C16, C18, or C20 monoumsaturated fatty acid product; and (b) a regulatory element operably linked to the nucleic acid encoding the polypeptide and conferring expression in a vegetative tissue of the plant. Also described: (1) a method of making a transgenic plant; (2) an isolated nucleic acid comprising the nucleotide sequence; (3) a recombinant nucleic acid construct comprising at least one regulatory element that confers expression in a vegetative tissue of a plant; and (4) a method of screening a transgenic plant for anthelmintic activity. The transgenic plant is useful in preparing compounds having anthelmintic activity. The exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 YTVANTYIPHLPPPLVYLAWPVYWFCQSCILTGLWVLGHECGHHAFSEYQWIDNAVGFVL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a transgenic plant containing at least one DNA construct comprising: (a) a nucleic acid encoding a polypeptide effective for ctalyzing the conversion of a substrate to a C16, C18, or C20 monounsaturated fatty acid product; and (b) a regulatory element operably linked to the nucleic acid encoding the polypeptide and conferring expression in a vegetative tissue of the plant. Also described: (1) a method of making a transgenic plant; (2) an isolated nucleic acid comprising the nucleotide sequence; (3) a recombinant nucleic acid construct comprising at least one regulatory element that confers expression in a vegetative tissue of a plant; and (4) a method of expression in a vegetative tissue of a plant; and (4) a method of plant is useful in preparing compounds having anthelmintic activity. The present sequence represents an epoxygenase which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New tranagenic plant having a DNA construct comprising a nucleic acid encoding a protein for catalyzing the conversion of a substrate to a C16, C18 or C20 monounsaturated fatty acid product, useful in preparing

```
The present invention relates to transgenic plants (I) containing one or more DNA constructs. The DNA constructs have a nucleic acid encoding a protein effective for catalyzing the conversion of a substrate to a 16C, 18C or 20C monounsaturated fatty acid product, e.g. a fatty acid epoxygenase or a fatty hydroxylase, and a regulatory element operably linked to the nucleic acid encoding the protein, where the regulatory element confers expression in vegetative tissue of the plant. The fatty acid epoxygenase or a fatty hydroxylase can be phospholipid:diacylglycerol acyltransferase (PDAT) or diacylglycerol acyltransferase (PDAT) or diacylglycerol acyltransferase (DAAT). (I) has an increased amount of hydroxy-fatty acid, e.g., vernolic acid, in a vegetative tissue. The DNA construct of (I) is useful in the production a vegetative tissue. The DNA construct of (I) is useful in the production of hydroxylases and epoxygenases that controls nematod elamage in commercially important plant species and so (I) exhibits increased resistance to nematodes. (I) provides an effective, environmentally safe methods of inhibiting nematode metabolism, growth, viability, casistance to nematode control, thus providing labor savings, by reducing the need for and frequency of chemical control. The present sequence is one such fatty acid epoxygenase and fatty hydroxylase used to illustrate
monounsaturated fatty acid product, useful for controlling nematodes.
                                                        Claim 21; SEQ ID NO 18; 180pp; English.
